Course description	The subject is considered on	e of the main subjects of the "Design" specialty. This	
	subject course consists of a t	heoretical and practical part that explains the concept	
	of categories and principles	of design.	

Course objectives

Course objectives:

The purpose of studying the subject is to form the basic concepts of the categories and principles of the project activity related to the issues of design graphics and design planning of the student at the bachelor's level of education. Both theoretical and practical knowledge to be taught is the basis of the design major and lays the foundation of the concepts that the individual who will master this profession will apply in any projects he/she will implement. Through practical tasks designed for the application of the theoretical knowledge learned during the course of the subject, students will learn the process of idea formation in the design process, the application of the planned idea on the object based on the requirements, and the fundamental knowledge required for the professional drawing of the given idea for the project.

Results of teaching (learning)

In the process of general teaching of the subject, students:

should know:

- Development of the student's professional worldview and abstract thinking aboutcomposition and design graphics;
- Formation of a complete understanding of compositional issues in the design solution of various objects that contribute to the creative expression of artistic thought;
- Studying and adequate assessment of individual capabilities for composition anddesign graphics;
- Formation of the ability to work independently with educational and special literary publications and other information sources;
- Practical experiences and methods necessary for the realization of a fully functional artistic composition solution necessary in the student's thinking.

will learn:

- Basics of design;
- Theoretical foundations of modern methods of composition structures;
- Formation of practical skills of creative tasks;
- Professional thinking, artistic creative methods related to composition;
- Studying and applying the means of artistic expression of the composition in the design solution;
- Formation of artistic and graphic competence in design solution;
- Being able to design the object step by step based on the given task;
- Being able to design model.

Rules

Task

(Education policy and conduct)

It will be given once per semester by the subject teacher on topics that will be mainly applied practically and will consist of making a collage. Students should prepare the assignment individually and present it in class. Depending on the content, assignment will be required in graphic form and will be graded out of 20 points. The assignment must be submitted by the student. The purpose of this assignment is to form and develop the skills of future designers to be able to present, do small research and design in a short period of time.

Duration:

The collage should be prepared and submitted by the time of the midterm exam.

Attendance

The maximum score for class attendance is 5 points. The number of points is based on: if the student attends all classes in the subject during the semester, he is given 5 points. If the total number of lessons missed during the semester for the subject is higher than the standard 25% (illness, family situation, etc.), the student is not admitted to the exam session and a certain decision is made about it.

Midterm Exam:

A review of the exhibition hall project, which the student will work on during the semester, is planned. Pencil versions of existing drawings must be submitted during project review.

Duration:

The review of the project will be done during the midterm exam.

Final exam:

The exhibition hall is required to be completed and handed over. Handover of students' practical work is intended as an exam, and on the appointed day, it is evaluated by the commission appointed by the department.

Note: Practical work should be done on a drawing board.

Completion of the course

The student's knowledge is evaluated with a maximum of 100 points. An overall success rate of 60% and above is considered to complete the course. A failed student can take this subject againin the next semester or the next year.

Rules of conduct of the student

A student is not allowed to violate the University's internal disciplinary rules and use a mobile phone.
