

Identification	Subject	Strength of Materials
	Department	Civil Engineering
	Program	Undergraduate
	Term	Autumn 2024
	Instructor	Aynura Aliyeva
	E-mail:	Aynurahasanova777@gmail.com
	Phone:	0558746616
	Classroom/hours	
	Office hours	
Prerequisites	Engineering Mechanics general understanding of rules and techniques of Phisic Mechanics	
Language	English	
Compulsory/Elective	Elective	
Description	general understanding of rules and techniques of Phisic Mechanics	
Required textbooks and course materials	Mechanics of Materials, F.P. Bear, E.R. Johnston, J.T. DeWolf, D.F. Mazurek Copies of the book is available in the library. Also, students are encouraged to Send an email to the instructor. The pdf file will be emailed back in 24h. .	
Course website		
Course outline	Strength of materials, also called mechanics of materials, is a subject which deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more complete theory of the elastic and plastic behavior of materials. An important founding pioneer in mechanics of materials was Stephen Timoshenko. Strength of materials is based on the understanding of basic concepts and on the use of simplified models. This approach makes it possible to develop all the necessary formulas in a rational and logical manner, and to clearly indicate the conditions under which they can be safely applied to the analysis and design of actual engineering structures and machine components.	
Course objectives	The main objective of the study of the strength of materials is to provide the future engineers with the means of analyzing and designing various machines and loadbearing structures. This course is aimed to develop in the engineering students the ability to analyze a given problem in a simple and logical manner and to apply to its solution a few fundamental and well-understood principles. This course in mechanics of materials or strength of materials is offered to engineering students in the sophomore or junior year.	
Learning outcomes	<ul style="list-style-type: none"> • Recongise physical phenomenon in the context of strength of materials, • Demonstrate an understanding of the structural mechanics theory for deformable bodies • Apply structural mechanics of deformable bodies to solve engineering problems • Demonstrate an understanding of the relationships between loads, member forces and deformations and material stresses and strains • Demonstrate an understanding of the assumptions and limitations of the structural mechanics theory • . Competence in problem identification, formulation and solution. 	
Teaching methods	Lecture	X
	Experiential exercise	X

	Assisted work	x	
	Assisted lab work	x	
	Others		
Evaluation	Methods	Date/deadlines	Percentage (%)
	Midterm Exam		30
	Class Participation and Attendance		5
	Quizzes		10
	homework		5
	Project (3 phases)		10
	Final Exam		40
	Total		100
Policy	<ul style="list-style-type: none"> • NO CELL PHONES are allowed during lecture and lab sessions. PLEASE turn them off before lecture! (Not silent or vibrating mode) • No late assignments will be accepted without prior arrangement with the instructor for acceptable excuses. Medical and family emergency will be considered on case-by-case basis. • No late homework will be accepted. Homework is to be completed on an individual basis. Students may discuss homework with classmates, but students are responsible for your own work. If students have consulted classmates, please note the individuals name on the top of students' assignment. • Quizzes may be given unannounced throughout the term and will count as one homework. There will be no make-up quizzes. • No make-up exams. If students miss an exam, a zero score will be assigned to the missed exam. • If students should miss class due to personal emergency or medical reasons, please notify the instructor by email immediately. A doctor's note will be required for make-up work. • Students are responsible for completing the reading assigned from the textbook related to the covered topics and for checking email regularly for important information and announcements related to the course. • University policy on academic honesty concerning exams and individual work will be strictly enforced. • BE ON TIME! 		

This syllabus is a guide for the course and any modifications to it will be announced in advance.

Week	Date/Day (tentative)	Topics	Textbook/Assignments
Week		Topic	Textbook
1		Introduction	Chap 1
2, 3		Concept of Stress	Chap 1
4, 5		Stress and Strain— Axial Loading Quiz1/ Delivery of assignments	Chap 2
6, 7		Stress and Strain— Axial Loading	Chap 2
8-10		Torsion Quiz 2/ Delivery of assignments	Chap 3
11, 12		Pure Bending	Chap 4
13, 14		Analysis and Design of Beams for Bending	Chap 5
15		Shearing Stresses in Beams and Thin-Walled Members, Quiz 3/ Delivery of assignments	Chap 6
16		Final Exam/ Delivery of assignments
